The University of East Anglia supports health, hygiene and sustainability with the Zip HydroTap Classic Plus

Location: Norwich

Client: University of East Anglia (UEA)

Sector: Education

Product: HydroTap Classic Plus

The brief

Ensuring a safe and hygienic working environment amidst the COVID-19 pandemic became a key priority for UEA. Balancing this goal alongside UEA's campus-wide sustainability initiatives and ensuring optimum employee hydration became a challenge for CBRE, UEA's maintenance subcontractor.

The solution

We installed the new HydroTap Classic Plus, ticking off all requirements. Offering instant filtered boiling, chilled and sparkling water at the touch of a button means that staff can quickly and easily fill up their bottles and mugs without needing to queue. The addition of SteriTouch® antimicrobial technology in the touchpad and in key components in the water path, which kills 99.9% of bacteria, ensuring a safe and hygienic environment. Alongside supporting refill culture, the HydroTap Classic Plus goes further by reducing water wastage thanks to air-cooling technology as well as conserving energy with features such as the lux sensor and programmable timer.

The results

“Hygiene and instant use are the biggest benefits. Everyone has access to the convenience of filtered boiling and chilled water on their tea break - it's there, it's instant. Especially with the current circumstances, the HydroTap reduces risk by removing the need for people to congregate in one room to get their drinks.”

Gavin Sargent - UEA's Fabric Supervisor
University of East Anglia
